

JOHANNA CASTILLO

3-DAY TRAINING PLAN

Age 51 · 5'4" · 172 lbs · 3-Day Program

70%
MODERATE

DAY 1 — FULL BODY STRENGTH & METABOLIC CONDITIONING

Moderate Strength + Cardiometabolic Priority

MODERATE STRENGTH · VOLUME BUILD · CONDITIONING PRIORITY

70% day — moderate strength, building volume without peak CNS demand. Loads sit on established baselines (Hip Thrust, Seated OHP) while a conditioning finisher supports the VFA/body-fat priority. Strength maintenance, not muscle-building-primary — ALST is already optimal at 7.23 kg/m².

Warm-Up

5 min bike, band pull-aparts x15, bodyweight squat x10, glute bridge x10, arm circles x10/direction

A — GLUTE ACTIVATION & CORE BRACING

Bracing pattern rehearsed here carries directly into the loaded hip thrust and carry work in Block B/C.

EXERCISE	SETS	REPS	LOAD	TEMPO	REST	COACHING CUE
Banded Glute Bridge	2	12	mini band	2-1-2	45s	Squeeze glutes, ribs down, band stays taut.
Dead Bug	2	8/side	bodyweight	3-1-1	45s	Brace low back flat, slow opposite arm/leg.
Bird Dog	2	8/side	bodyweight	2-2-2	30s	Neutral spine, reach long, no hip rotation.

B — PRIMARY STRENGTH

Working sets at 70% — 2 RIR. Brace before lifting and exhale on exertion on the Hip Thrust. If you feel any leaking, heaviness, or pressure, stop and flag your coach — this is common and treatable.

EXERCISE	SETS	REPS	LOAD	TEMPO	REST	COACHING CUE
DB Hip Thrust <i>Brace + exhale on exertion — pelvic floor cue</i>	3	8	60 lbs	2-1-2	90s	Drive through heels, glutes lock at top. 2 RIR
Seated DB Overhead Press	3	8	17.5 lbs	2-0-2	75s	Ribs stacked over hips, press straight up. 2 RIR
Chest-Supported Row	3	10	20 lbs	2-1-2	75s	Squeeze shoulder blades, elbows track back. 2 RIR

C — ACCESSORY

Farmers Carry is bilateral load-bearing — same pelvic floor bracing cue applies before every pass.

EXERCISE	SETS	REPS	LOAD	TEMPO	REST	COACHING CUE
Incline Push-Up	3	8	bodyweight (bench)	3-1-1	60s	Hands under shoulders, chest to bench, brace. 2 RIR

EXERCISE	SETS	REPS	LOAD	TEMPO	REST	COACHING CUE
DB Farmers Carry <i>Brace before lifting — pelvic floor cue</i>	3	40 yd	30 lbs/hand	controlled	60s	Tall posture, ribs down, quick tight steps. 2 RIR
Plank Hold	3	40 sec	bodyweight	hold	45s	Ribs down, glutes tight, breathe steady.

D — METABOLIC FINISHER

Short conditioning finisher supports the cardiometabolic/fat-loss priority driven by elevated VFA and body fat %. Brisk and sustainable — not a max-effort test.

EXERCISE	SETS	REPS	LOAD	TEMPO	REST	COACHING CUE
Kettlebell Swing	4	20 sec on/40 sec off	25 lbs	explosive hip snap	40 sec	Hinge, snap hips, arms stay relaxed.
Step-Up	4	20 sec on/40 sec off	bodyweight	controlled	40 sec	Drive through full foot, stand tall at top.

Cool-Down

Couch stretch 30s/side, doorway chest stretch 30s/side, child's pose 45s

ICONS Note

Cardiometabolic priority this block — VFA 142.7 cm² and body fat 40.4% drive the conditioning finisher. Brace before every hip thrust and carry rep; flag any pelvic pressure, heaviness, or leaking to a coach immediately.

60%
TECHNIQUE

DAY 2 — LOWER BODY TECHNIQUE
Squat & Deadlift Introduction + Right-Leg Asymmetry Protocol
TECHNIQUE DAY · LIGHTER LOADS · FULL ATTENTION TO FORM

60% day — technique priority. Squat and deadlift were not tested in the initial battery, so today's loads are deliberately light and become the new 8-week baseline. Right leg leads every unilateral set — Styku segmental LST shows an 0.5 lb deficit (17.5 vs 18.0 lbs), exactly at the asymmetry protocol trigger.

Warm-Up

5 min bike, hip circles x10/direction, banded lateral walk x10/side, bodyweight squat x10, glute bridge x10

A — MOVEMENT PREP

General hip and glute activation before the squat and unilateral patterns below.

EXERCISE	SETS	REPS	LOAD	TEMPO	REST	COACHING CUE
Banded Lateral Walk	2	10 steps/side	mini band	controlled	30s	Band above knees, push knees out, stay low.
Bodyweight Squat to Box	2	10	bodyweight	3-1-1	30s	Sit back to box, knees track over toes.

B — PRIMARY STRENGTH — TECHNIQUE INTRODUCTION

No baseline was recorded for squat or deadlift. Loads stay light; the goal is a clean, repeatable pattern for 8-week testing, not load.

EXERCISE	SETS	REPS	LOAD	TEMPO	REST	COACHING CUE
Goblet Squat	3	8	20 lbs	3-1-1	75s	Elbows inside knees, chest tall, full depth. 3+ RIR
Trap Bar Deadlift	3	6	45 lbs	2-1-1	90s	Flat back, brace, push floor away evenly. 3+ RIR

C — UNILATERAL LEG — RIGHT-LED

Styku scan shows a 0.5 lb right-leg deficit (L 17.5 / R 18.0) — at the asymmetry trigger threshold. Right leg leads every set below; log reps per side.

EXERCISE	SETS	REPS	LOAD	TEMPO	REST	COACHING CUE
Single-Leg RDL <i>Right leg weaker (Styku) — leads every set</i>	3	6/side	22.5 lbs/hand	3-1-1	60s	Right leg first. Hinge, flat back, soft knee. 2 RIR
Reverse Lunge <i>Right leg leads</i>	3	8/side	bodyweight	2-1-1	60s	Right leg first. Knee tracks over mid-foot. 2 RIR

D — METABOLIC FINISHER

Low-impact conditioning to close the session without adding lower-body fatigue that would compromise squat/deadlift technique tracking.

EXERCISE	SETS	REPS	LOAD	TEMPO	REST	COACHING CUE
Rowing Machine Intervals	5	30 sec on/30 sec off	moderate	steady power	30 sec	Legs drive first, then lean, then pull.
Standing March w/ Band	3	10/side	light band	controlled	30s	Knee to hip height, stand tall, no lean.

Cool-Down

Couch stretch 30s/side, standing quad stretch 30s/side, child's pose 45s

ICONS Note

First exposure to squat and deadlift patterns — log today's working loads as the new baseline for 8-week testing. Right leg leads all unilateral work this block; track the L/R gap at rescan.

70%
MODERATE

DAY 3 — UPPER BODY & POSTERIOR CHAIN

Pressing/Pulling Strength + Metabolic Finisher

MODERATE STRENGTH · VOLUME BUILD · CONDITIONING PRIORITY

70% day — moderate strength, building pressing/pulling volume without peak CNS demand. Suitcase carry and single-arm row are logged per side given the marginal right-arm deficit on Styku (below the formal 0.5 lb trigger, tracked as routine monitoring).

Warm-Up

5 min bike, band pull-apart x15, scapular wall slide x10, arm circles x10/direction

A — SCAPULAR ACTIVATION

Shoulder prep before pressing and rowing loads.

EXERCISE	SETS	REPS	LOAD	TEMPO	REST	COACHING CUE
Band Pull-Apart	2	15	light band	2-1-2	30s	Squeeze shoulder blades, elbows stay straight.
Scapular Wall Slide	2	10	bodyweight	controlled	30s	Ribs down, slide arms, keep low back flat.

B — PRIMARY STRENGTH

Working sets at 70% — 2 RIR on all sets.

EXERCISE	SETS	REPS	LOAD	TEMPO	REST	COACHING CUE
Bent-Over DB Row	3	10	20 lbs/hand	2-1-2	75s	Flat back, pull to hip, squeeze at top. 2 RIR
Incline DB Press	3	8	17.5 lbs/hand	3-1-1	75s	Ribs down, press up and slightly in. 2 RIR

C — ACCESSORY

Suitcase carry loads the pelvic floor bracing pattern under single-side load. Brace before lifting, exhale on exertion — flag any leaking, heaviness, or pressure to a coach.

EXERCISE	SETS	REPS	LOAD	TEMPO	REST	COACHING CUE
Single-Arm DB Row <i>Log reps per side — track L/R (Styku)</i>	3	10	20 lbs	2-1-2	60s	Brace on bench, pull to hip, no rotation. 2 RIR
Suitcase Carry <i>Brace before lifting — pelvic floor cue</i>	3	30 yd/side	25 lbs	controlled	60s	Ribs stacked, resist leaning, quick steps. 2 RIR
Plank Hold	3	40 sec	bodyweight	hold	45s	Ribs down, glutes tight, breathe steady.

D — METABOLIC FINISHER

Closing conditioning block supports the cardiometabolic/fat-loss priority. Brisk and sustainable — not a max-effort test.

EXERCISE	SETS	REPS	LOAD	TEMPO	REST	COACHING CUE
Bike Sprint Intervals	5	20 sec on/40 sec off	moderate	high effort, controlled	40 sec	Brisk and sustainable — not a max effort test.
Bodyweight Squat to Stand	3	12	bodyweight	controlled	30s	Full stand each rep, breathe out on the way up.

Cool-Down

Doorway chest stretch 30s/side, lat stretch 30s/side, cat-cow x8

ICONS Note

Log single-arm row and suitcase carry reps per side — right arm is marginally lighter on Styku (8.4 vs 8.7 lbs) though below the formal asymmetry trigger. Brace before the suitcase carry and exhale on exertion; flag any pelvic pressure, heaviness, or leaking to a coach.
